

Arm and Hand Wound Case Study

Subject: Female, 63 years old

Wound Size: Varied

Wound Location: Multiple locations on the left arm, wrist, and hand.

Product Used: Armor Gel (24 ppm hydrogel wound dressing)

Wound Management Protocol: The subject's wound was from surgery and was managed under the supervision of a physician. Armor Gel was applied topically to the wound, and it was covered with a bandage. The Armor Gel was then reapplied every time the bandage or brace was removed to do therapy (5 times daily). No other wound management products were used. The before and after pictures shown below were taken on **Day 1** and **Day 28**.
